What We a

Vehicle, Station a

In addition to our measures to keep

- We are disinfecting all vehicles, stations and facilities daily, including all surfaces that are frequently touched using EPA-approved disinfectants.
- We are installing UVC lights inside the HVAC units on light rail vehicles. The UVC lights sterilize the air flowing throughout the vehicles.
- On UTA On Demand by Via, we have increased our cleaning and disinfecting procedures to ensure the safety of our riders. We have also implemented in-app wellness checks for riders and drivers to confirm they are symptom free before riding or driving.
- We are periodically testing vehicle surfaces using ATP monitoring to verify the effectiveness of our cleaning and disinfecting measures on vehicles.

Physical Distancing on Transit

We have taken several measures to promote physical distancing on our system to protect our riders and employees.

Service Adj

Similar to other tr COVID-19 pande decrease in our sa ensure fiscal respo and allow for social distancing on our vehicles.

Our most recent service adjustments took place on November 29, 2020 for our annual [November Change Day](#). After restoring 90 percent of our service in August, we remain at a similar level of service with a few adjustments and small additions. Key changes made in November include additional trips on some flex routes and the start of UTA's regular seasonal ski service. More information can be found [here](#).

We continue to closely monitor ridership data, as well as feedback from our customers and the community, and are prepared to make further adjustments to ensure we continue to operate safely.

Use one of the following tools to plan your trip and be sure to check our [holiday schedule](#) information:
